Deadlocking is controlled by a snib in the front plate. The lock cases fitted with at feature to prevent unauthorized use of the snib. The snib can be moved by turning first the key or thumbturn. The lock has no lever handle operation. When the snib is in its up position, the door deadlocks when it closes and can only be opened by a key and by the thumbturn. When the snib is in its down position, the latchbolt is retained inside
